Adobe announces a new App in the Cloud with the name Adobe Productivity Cloud, which would, in theory, allow you to work on a single file in the cloud and then access other features, such as interactivity, in the Cloud on any of your devices. The company is working on ways to make the file available to contacts such as Dropbox for collaboration, so that your friends and colleagues can see your work. The work will be stored in the cloud, so you don't have to worry about downloading and having to learn new file management routines. As my last gripe, I'd like to see more of an emphasis in some areas of the review on the multi-user feature. I'm not sure if there's a way to automate this or if users can disable it, but there's generally more than one person using the review functions. Finishing the review — especially when the reviewer has

joined in back and forth — can take hours if not days. With the extended nature of some reviews and the number of people involved, it's nice to have a multi-user mode. As you can probably tell, my preferred shooter and retoucher is a Canon (or Sony) DSLR, but I love using Lightroom to process my images. The use of external drives where I can easily backup hundreds of images is invaluable. Whether you are just starting out or are a pro user, a lightroom license would really come in handy. As a practical matter, buying from the Mac App Store is almost always a better deal than buying from the Mac App Store than buying from the Mac App Store. In order to use Lightroom 4, you will need a Mac with at least 10.9 Mavericks (iMac 2011, MacBook Pro, MacBook Air 2009, etc). Also, as usual, there are a number of optional extras sold on the App Store. Photoshop costs \$149, Elements \$79, Adobe Camera Raw (non-CC) \$19.45, Adobe Camera Raw (CC) \$14.75, Adobe Lightroom \$49.45, Adobe Presenter \$49.45 and AI Servo \$99.45. The last number is for the optional AI Servo program which does some of the for you image editing for you, including some effects. Most people I know don't need all of these things and can get by with the basics. Depending on your financial situation and lifestyle, it wouldn't break the bank to buy Lightroom from the Mac App Store, even if you don't need the other bonuses mentioned. It's also worth noting that the Adobe Creative Cloud option is optional as well. I just don't see a reason to pay \$48 per month for it. I'll leave you with a screen capture of the main screen of Lightroom, which is slightly more complex than most other photography programs, make sure to check out the rest of this review for more details:

I hope this will help you in some way. But before I go, let me share a secret with you - I'm a photographer who uses Lightroom and Photoshop - and many years ago I also worked for Digital Cable TV and also covered the professional movies. So I know MANY things about editing videos,

photos and graphics! Even if you don't want to use Adobe software, I know the capabilities and under the hood with both of these. The best of the best from Lightroom and Photoshop are here and I can help you with all that. **What It Does:** The Levels tool allows you to adjust the light and dark areas of your image, allowing you to create a more realistic or dramatic image with a slight adjustment. Although it's possible to adjust the Levels tool as you would any adjustment in Photoshop, doing so with the Autoflood tool under the Expert mode lets you get more detailed results when working. This mode is ideal for working with color adjustments, especially in the area of skin tones. It is convenient for the user to manage the masked-out area that works smoothly and fast of the application, or the cleaned content without intricate adjustments to the content. In the application, users have to deal with managing ghosting, false reveals, and unwanted margin spaces. Adobe Photoshop will manipulate ghosting, make-up the margins, and remove tool spaces. The best part is the interface is user friendly making it easy for the user to manage the layers, make selections against the layer, access the layer properties, and mask areas of the layers. 933d7f57e6

Lifesaver mode will make you a slouch, when it comes to keeping your laptop free from sticky fingers, and less likely to be disrupted mid-presentation. Templates, Wi-Fi Sync, and Adobe Sync will all make your workgroup life so much easier in a collaborative environment. The top 11 tools and features for Photoshop have some special and little known truths in the timeline since they moved to creative cloud. Without further ado, here they are:

- **Rule of Thirds:** This is an important scheme that the design industry has accepted to help in organising images so that the composition of a photograph will make more sense. It's not at all new as we see it a lot in the great works of art across the centuries. It's simply arranging the edges of an image according to the golden ratio.
- **Spacing & Leading:** The tools such as leading and spacing; which also can be labeled as text measurement; are now available in the format adjustments. We can measure the size of an object such as text and then space it. This is further used in cropping images, creating typographic effects or in setting the size of objects and text. This frees our hands and the design from looking for meagre measurements. And Adobe has made it very easy to do.
- **Strokes Panel:** The revamped Strokes panel has given us many options that help us correct, retouch or replace the path of a host of components in Photoshop.
- **Batch Process:** We can now process multiple images at a time on the Pixel Perfect mode, which was recently introduced.
- **Content Aware Fill:** The Illustrator's Content Aware Fill is now available for Photoshop. This feature helps us to fill an object or text in a photo and recover the original without blurring. It also gives us the option to hide elements like layers to save time.
- **Layer Fixture:** We can now drag and drop variants of our layers into the Layer Fixture panel. These are different layout ideas that can later be edited and experimented with to create a unique design. This tool is handy if you've had some other design ideas

kicking around and you don't want to muck up the idea you had. This way you can experiment with alternate designs without the pressure of ruining your original.

- **Reflection Map:** The Reflection Map has got some new and superior features. It has improved the image and lets us create various effects; or we can also get rid of unwanted reflections. The Reflection Filter can help us to achieve layer-based highlight reflections.
- **Magic Spelunkers:** These function as a toolbox that lets us select fonts, paragraphs, tables, etc. for formatting. They are also known as navigation bars. This tool is very helpful when shortening long paragraphs for ebook readers.
- **Broader images:** Photoshop now has the ability to handle broader images sized between 800 percent and 1200 percent. It's great for working with images in groups. The images are more unique and it lets us see how Photoshop will process them in terms of image editing, cropping, or effects. It shall be a useful feature when you're running a webinar.
